SUMMARY

Innovative and motivated Computer Science Engineering (AI) student with strong foundations in Python programming, data analytics, and machine learning. Experienced in building AI and data-driven applications, performing data preprocessing, visualization, and predictive modeling. Passionate about applying AI and ML techniques to solve real-world problems and eager to contribute in a collaborative, research-oriented environment.

EDUCATION

Degree	Institute	Board / University	Year	CGPA / %
B.Tech (AI)	Chhattisgarh Swami Vivekanand Technical University	CSVTU Bhilai	2023–2027	8.2 CGPA
Senior Secondary (XII), Science	Amaravathi Junior College	AP State Board	2023	95.7%
Secondary Education (X)	D.A.V. Public School	AP Board	2021	98%

PROJECTS

Employee Management System Python, Tkinter, SQLite3

– Developed a GUI-based CRUD application in Python to efficiently manage employee records with add, update, delete, and search functionalities.
– Designed and optimized an SQLite3 database for fast, reliable data storage, retrieval, and updates, ensuring consistency and scalability.
– Implemented input validation, exception handling, and data integrity checks to maintain accurate and error-free employee information.
– Built a modular and scalable code architecture to support easy maintenance and future feature enhancements.
– Streamlined HR workflows, reducing manual effort and improving overall operational efficiency and record management.

Stock Price Trend Prediction Python, Pandas, Scikit-learn

– Developed a predictive model to classify stock price trends (upward, downward, sideways) using machine learning algorithms and historical stock data.
– Implemented data preprocessing, feature engineering, and normalization to improve model accuracy and handle market volatility effectively.
– Trained and evaluated multiple ML models, optimizing hyperparameters to achieve robust and reliable trend predictions.
– Visualized predicted trends with intuitive charts and graphs, enabling clear interpretation of stock movement patterns for decision-making.
– Integrated the system into a user-friendly interface for real-time trend prediction and actionable insights, supporting informed trading strategies.

AI-Driven Chat Assistant Python, TensorFlow, NLP

– Developed an AI-driven chat assistant using natural language processing to understand and respond to user queries intelligently and contextually.
– Implemented data preprocessing, tokenization, and embedding techniques to enhance model comprehension and response accuracy.
– Trained and fine-tuned language models to provide relevant, coherent, and context-aware replies across diverse topics.
– Integrated the assistant with a user-friendly interface, enabling real-time interaction and seamless conversation flow.
– Incorporated error handling, fallback responses, and conversation logging to improve reliability and continuous learning.

TECHNICAL SKILLS

Programming Languages: Python, C, C++, R, HTML, CSS
Libraries and Frameworks: NumPy, Pandas, Matplotlib, Scikit-learn, TensorFlow, Keras
Data & Tools: MS SQL Server, Power BI, Tableau, MS Excel, Jupyter Notebook, Google Colab
Concepts: Machine Learning, Data Preprocessing, EDA, Feature Engineering, Regression & Classification Models, Clustering, Neural Networks, Deep Learning, Model Evaluation, AI Ethics
Soft Skills: Problem Solving, Analytical Thinking, Teamwork, Research, Communication

CERTIFICATIONS

– 1-Month Summer Internship on Artificial Intelligence and Data Analytics – Edunet Foundation (2025)
– Data Analytics and Visualization – Forage (Mar 2025)
– Advanced Software Engineering – Forage (Mar 2025)
– Data Analytics Virtual Experience – Forage (Mar 2025)
– Machine Learning Specialization – Coursera

ACHIEVEMENTS

– National Level Certificate in Volleyball
– 1st Position – School Spell Bee Competition

HOBBIES

Reading Tech Books, Exploring AI Projects, Gaming, Nature Exploration
